Mouse CD152(CTLA4) /Fc Fusion Protein

CATALOG#: MF-120A4**QUANTITY:** 10 mg **CONCENTRATION:** 1.0 mg/ml

MOLECULAR STRUCTURE: A soluble 110 kd dimeric fusion protein consisting of the extracellular (180aa) domain of mouse CD152(CTLA4) fused to mouse IgG2a Fc.

TRANSFECTANT CELL LINE: NS.1

INFORMATION: Mouse CD152(CTLA4) /Fc Fusion Protein

INFORMATION: Immune response mediated by T cells can be characterized to functionally proceed as follows: antigen recognition by the T cell receptor, activation through costimulation, effector activities to eliminate antigen and finally down regulation. Mouse CD152 is a cell surface glycoprotein expressed at low levels on activated T cells (1). CD152 is a high affinity receptor for the costimulatory molecules CD80 (B7-1) and CD86 (B7-2) while CD28 binds to CD80 and CD86 with lower Affinity (2, 3). CD28 and CD152 play important roles in regulating the magnitude and nature of T cell mediated immune response. CTLA4/Fc, a soluble chimeric fusion protein, blocks the B7/CD28 signaling pathway by binding to CD80 and CD86 (1). CD152/Fc will block the binding of anti-CD80 (B7-1) and anti-CD86 (B7-2) monoclonal antibodies as well as block the interaction of CD80 and or CD86 with cell surface CD28 and/or CD152 (4). Using CTLA4/Ig, many investigators have shown that interruption of the B7/CD28 pathway can lead to suppression of allo- and xenoimmune responses, and, in some cases, induction of Ag-specific tolerance (5-7). However, by blocking B7 generated signals, CTLA4-Fc may prevent the negative regulatory CTLA4 signal (8-10).

STORAGE CONDITIONS: Store stock solution at -20⁰C. Store working solution at 4⁰C. Freeze/Thawing is not recommended.

PRODUCT STABILITY: Product should retain for at least one year after shipping date when stored at -20⁰C and the working solution should retain for at least one month at 4⁰C.

BUFFER: 50 mM Sodium Phosphate pH 7.5, 100 mM Potassium Chloride, 150 mM NaCl.

PRODUCTION: Mouse CTLA4 Ig fusion protein was purified from

serum free tissue culture supernatant of NS.1 transfectants. Purity was >99% by SDS-PAGE.
